PowerRAMP®
Crossover Cable Protection System

- Heavy duty construction for vehicular and pedestrian traffic
- Exclusive tread design provides excellent traction
- Non-conductive construction protects electrical cables and hoses
- Mates with major cable protector brands and products
PowerRAMP® Crossover Cable Protection System

Lex Products’ PowerRAMP® Crossover Cable Protection System delivers durability, safety and convenience with quality construction and materials designed to stand up to pedestrian and heavy vehicular traffic while protecting electrical cables and hoses. PowerRAMP® products are ideal for indoor or outdoor industrial and entertainment applications, and include 5-channel crossovers, 45° left and right turn units and end boots.

Enhanced Durability and Quality Construction:
PowerRAMP® Crossover Cable Protection System components deliver enhanced durability due to unique design and quality construction. A two-part polyurethane compound process creates a sturdy lid and base that can withstand heavy traffic with a load capacity of up to 32,600 lbs. per axle. The materials are UV stabilized to sustain strength for extended outdoor use in harsh conditions.

Whereas some cable protectors can be difficult to connect and disconnect, PowerRAMP®’s rugged industry standard connectors feature a proprietary “slip notch” friction release design for easy mating and un-mating of connectors. PowerRAMP® crossovers, left and right turn units and end boots are compatible with similar cable protection products of other major manufacturers. In addition, PowerRAMP®’s deep channels can accommodate up to 1.25 inch diameter cable or hose, and #2 AWG.
Type SC 5-wire banded cable, unlike some competitive products with smaller channels. This feature allows lids to lie flat over enclosed cables for increased protection and provides an even crossing surface to avoid trip hazards.

**Advanced Safety:**
PowerRAMP®’s exclusive tread design provides extra traction for better foothold in wet or slippery conditions and its bright blue lid is highly visible and identifiable. The entire product is made with non-conductive material for extra safety.

**Superior Convenience:**
PowerRAMP® Crossover Cable Protection System components feature an exclusive design that allows for compatibility and trouble-free mating with cable protectors of other manufacturers using similar connectors. Crossovers can be easily interconnected to protect cables of any length or mated with 45° left and right turn units and end boots for design flexibility. Convenient handle cut-outs are molded into the back side for easy portability.

**Customization Available:**
For customization, company names and logos can be molded into lids for easy identification and theft deterrence. Custom colors available. Consult your factory representative for details.

**45° Left and Right Turn Units and End Boots**

1.625 inch wide center channel allows for up to #2 AWG 5-wire banded sets
**PowerRAMP® Crossover Cable Protection System**

**ISO 9001:2008 Certified**
